* The integrated input noise is measured with an open but shielded amplifier input in the full bandwidth ("FBW") setting. The input referred peak-peak noise can be calculated from the rms noise as follows:

$$I_{pp} = I_{RMS} \times 6$$

The output noise is given by:

$$U_{pp} = I_{pp} \times \text{gain}$$

Output

Output voltage

 $\pm 10 \text{ V}$ (@ $\geq 100 \text{ k}\Omega$ load)Output impedance 50Ω (terminate with $\geq 100 \text{ k}\Omega$ load for best performance) $\pm 30 \text{ mA}$

Detector Bias

Bias voltage range

 $\pm 10 \text{ V}$, max. 22 mA (bias voltage connected to shield of BNC input socket, adjustable by potentiometer, switchable to GND)

| Remote Control Operation | General | Remote control input bits are opto-isolated and connected by logical OR function to local switch settings. For remote control set the corresponding local switches to "Remote", "AC" and "H" (High speed) and select the wanted setting via a bit code at the corresponding digital inputs. Mixed operation, e.g. local gain setting and remote controlled AC/DC setting, is also possible. Switch settings "FBW / 10 Hz" and "Bias / GND" are not remote controllable. | | | | |
